

CECS 174 – Extra Credit #1 – 5 points

Create an applet that allows the user to select the shape and color of a drawing.

The user selects a color red or blue and then a square or circle. When the “Draw” button is pressed the selected shape and color are drawn.

Use two sets of radio buttons, colors and shapes, to allow your user to select their choices.

Place your applet on a web page, email me the link, and print out your code.
